PURPOSE

Administrative Policies are intended to provide further information about the administration of **standard** Cigna benefit plans. In the event of a conflict, a customer's benefit plan document **always supersedes** the information in an Administrative Policy. Coverage determinations require consideration of 1) the terms of the applicable benefit plan document; 2) any applicable laws/regulations; 3) any relevant collateral source materials including Administrative Policies and; 4) the specific facts of the particular situation. Administrative Policies relate exclusively to the administration of health benefit plans. Administrative Policies are not recommendations for treatment and should never be used as treatment guidelines.

Administrative Policy

The Affordable Care Act (ACA) requires individual and group health plans to cover in-network preventive services and immunizations without cost sharing (e.g., deductibles, coinsurance, copayments) unless the plan qualifies under the grandfather provision or for an exemption. Coverage for preventive care services other than those mandated by ACA is dependent on benefit plan language. For example, many benefit plans specifically exclude immunizations that are for the purpose of travel or to protect against occupational hazards and risks. Please refer to the applicable benefit plan language to determine benefit availability and the terms, conditions and limitations of coverage. Services not covered under preventive care services may be covered under another portion of the health plan.

Preventive care services are covered as required by the Affordable Care Act (ACA). The ACA designated resources that identify the preventive services required for coverage are:

- United States Preventive Services Task Force (USPSTF) grade A or B recommendations
- Advisory Committee on Immunization Practices (ACIP) recommendations adopted by the Director of the Center for Disease Control and Prevention (CDC)
- Health Resources and Services Administration (HRSA) supported comprehensive guidelines which appear in any of the following sources:
 - Periodicity schedule of the Bright Futures Recommendations for Pediatric Preventive Health Care

- Uniform Panel of the Secretary’s Advisory Committee on Heritable Disorders in Newborns and Children
- Guidelines specifically issued for women and adopted by HRSA

Preventive care services include wellness examinations and routine immunizations. Certain recommended screenings identified by ACA are considered preventive care services for symptom-free or disease-free individuals. Typically preventive care services must be provided by in-network health care professionals. Ancillary services directly related to a screening colonoscopy or female sterilization procedures are considered part of the preventive service. This includes a pre-procedure evaluation office visit, the facility fee, anesthesia services, and pathology services.

According to the ACA, coverage of preventive services become effective upon a plan’s start or anniversary date that is one year after the date the recommendation or guideline is issued. The USPSTF assigns each recommendation a letter grade based on the strength of the evidence and the balance of benefits and harms of a preventive service. If a Grade A or B recommendation changes to a Grade C or I, coverage must be provided through the last day of the plan year. If a Grade A or B recommendation changes to a Grade D, or any previously recommended service is subject to a safety recall or is otherwise determined to pose a significant safety concern, there is no requirement to provide coverage through the last day of the plan year.

U.S.Preventive Services Task Force Letter Grade Descriptions	
Grade A	The USPSTF recommends the service. There is high certainty that the net benefit is substantial.
Grade B	The USPSTF recommends the service. There is high certainty that the net benefit is moderate or there is moderate certainty that the net benefit is moderate to substantial.
Grade C	The USPSTF recommends selectively offering or providing this service to individual patients based on professional judgment and patient preferences. There is at least moderate certainty that the net benefit is small
Grade D	The USPSTF recommends against the service. There is moderate or high certainty that the service has no net benefit or that the harms outweigh the benefits
Grade I	The USPSTF concludes that the current evidence is insufficient to assess the balance of benefits and harms of the service. Evidence is lacking, of poor quality, or conflicting, and the balance of benefits and harms cannot be determined

The ACA states reasonable medical management techniques may be used to determine coverage limitations if a recommendation or guideline does not specify the frequency, method, treatment, or setting for the provision of a recommended preventive service. Reasonable medical management techniques may include precertification, concurrent review, claim review, or similar practices to determine coverage limitations under the plan. These established reasonable medical management techniques and practices may be utilized to determine frequency, method, treatment or setting for the provision of a recommended preventive service.

Screening versus diagnostic, monitoring or surveillance testing

A positive result on a preventive screening exam does not alter its classification as a preventive service but does influence how that service is classified when rendered in the future. For example, if a screening colonoscopy performed on an asymptomatic individual without additional risk factors for colorectal cancer (e.g. adenomatous polyps, inflammatory bowel disease) detects colorectal cancer or polyps, the purpose of the procedure remains screening, even if polyps are removed during the preventive screening. However, once a diagnosis of colorectal cancer or additional risk factors for colorectal cancer are identified, future colonoscopies will no longer be considered preventive screening. Another example is a positive result on a screening stool -based deoxyribonucleic acid (DNA) (i.e., Cologuard) test. A positive result should be followed by a diagnostic colonoscopy which would not be considered preventive screening.

Reporting preventive care services

Preventive care services are reported with diagnosis and procedure codes which identify the services as preventive and not for treatment of injury or illness. (Reference chart below). Age or frequency limits are utilized for certain designated services (i.e., wellness exams, administration of Human Papillomavirus (HPV) vaccines, vision and hearing screening, services related to prevention of falls, nutritional and genetic counseling). Preventive care services submitted with diagnosis codes that represent treatment of illness or injury will be paid as applicable under normal medical benefits rather than preventive care coverage.

Modifier 33

Cigna does not process preventive care claims solely based on the presence of modifier 33, which was developed by the industry in response to the ACA's preventive service requirements. Preventive care services are dependent upon claim submission using preventive diagnosis and procedure codes in order to be identified and covered as preventive care services.

Additional Preventive Care Services

In addition to the designated services identified by ACA sources, adult wellness examinations, prostate cancer screening, double contrast barium enema for colorectal cancer screening, digital breast tomosynthesis for breast cancer screening, and venipuncture associated with preventive laboratory screenings are covered under the benefit as preventive care services. Professional society statements and guidelines may vary and are not considered part of ACA sources.

Summary

Preventive care services are those screenings, tests, and services that are performed for symptom-free or disease-free individuals. They may also include immunization and screening services for symptom-free or disease-free individuals at increased risk for a particular disease.

ACA has designated specific resources for coverage by the Act: which include the evidenced-based items or services that have in effect a rating of “A” or “B” in the current recommendations of the USPSTF; immunizations for routine use in children, adolescents, and adults that have in effect a recommendation from the ACIP of the CDC; for infants, children, and adolescents, the evidence-informed preventive care and screenings provided for in the comprehensive guidelines supported by the HRSA; and with respect to women, evidence-informed preventive care and screening provided for in comprehensive guidelines supported by HRSA. If a recommendation or guideline does not specify the frequency, method, treatment, or setting for the provision of that service, reasonable medical management techniques may be used to determine any coverage limitations. Professional society statements and guidelines may vary and are not considered part of ACA sources.
